

Command Line Integration

CC File Hidden includes a command line optimized program CCFH.exe, which can be accessed by Command prompt.

Enabling Command Line Integration

1. Open the **Control Panel**.
2. Go to "**Control Panel\System and Security\System**".
3. Select "**Advanced System Settings**".
4. Select "**Environment Variables**" from the System Properties window (bottom-right, above the cancel button).
5. Edit "**Path**" variable under your user account and add (do not replace all of the content) the root folder of the CC File Hidden installation (usually "**C:\Program Files (x86)\Ninponix\CC File Hidden**").
6. Save all of the settings by pressing the OK buttons in all of the parent windows (OK, just close control panel windows you don't need).

CMD Commands

(Put CCFH in the front of every command to make them work in cmd.exe)

| Command | Function |
|------------------------|--|
| ClearPreviews | Quickly clears preview files stored in the system. Make sure that no program is using the preview files while this command is executing. |
| Help | Shows the reference or manual for the Commands that can be used in CCFH. |
| Open | Opens CC File Hidden |
| Open [PASSWORD] | Opens CC File Hidden immediately to the Home. |
| -Version | Reveals the current version and the edition of CCFH you are using currently. |

| | |
|--------|--------------------------------------|
| DelAll | Deletes each and every file in CCFH. |
|--------|--------------------------------------|

WARNING: DELALL COMMAND ASKS YOU ONLY ONCE WHETHER YOU WANT TO DELETE EACH AND EVERY FILE FROM CC FILE HIDDEN OR NOT, AFTER YOU PRESSED 'Y' FOR THE QUESTION AND RETURNED YOU'LL NEVER FIND THAT FILE IN YOUR COMPUTER. (DEEP RECOVERIES ARE NOT TESTED YET 😊)
