

Xpress – Installation Instructions

Flash CS3, CS4, CS5, and CS5.5 for Microsoft Windows

Three important notes before you get started:

1. In order to install Xpress on your system, you'll need Adobe Extension Manager, which is included in the standard installation of Adobe Flash professional CS3. (If you do not have Extension Manager, you can download it directly from Adobe for free at: www.adobe.com/exchange/em_download/)
2. You must have an active Internet connection while installing and running Xpress.
3. If you are upgrading from Fast Talk, you will need to remove Fast Talk before continuing.

Installing Xpress:

1. Extract **Xpress.zip** file to a folder on your hard drive.
2. Launch Adobe Extension Manager. Make sure that the *Active Product* is set to **Flash CS3 (or Flash CS4)**.
3. Click **Install**, and select the file **Xpress.mxp** in the extracted Xpress folder. Accept the License Agreement when prompted to complete the installation.
4. Next, double click on **Register Xpress** and type in your Xpress serial number supplied to you in the New Membership email and then click **Save**. This will register and activate your copy of Xpress on your computer.
5. If you encounter a problem running **Register Xpress**, verify that you have the latest version of Microsoft .NET installed on your system through Windows Update and that you are running from a local drive.

If you encounter any problems installing Xpress during the Beta phase, please send an email to support@doublebarreldigital.com.
